VIKING KNIT Bead Cap Mandrels

(total mandrel length 12 inches)

- Make two at a time, controlling both size and design (two caps - one mandrel)

A very good tip is to start the caps from each end and fill in the middle to better match length and size.

Viking Knit bead caps and matching focal bead all fitting perfectly on your Viking chain

Beads - *Make your beads (Big hole, barrel, tube ?) with same size hole as your caps*

Pandora bead makers

Use the 4 mm mandrel for your bead when not adding a lining.

- *Use the 6 mm mandrel for Pandora when adding either tube lining or rivet.*

Larger size bead caps - *Double dip the mandrels and when dry remove the bead release from each end of the cap tip. Now single dip just that portion, and on the long handle end of the mandrel replace bead release with a small brush or your finger. This will retain the small hole (3/32") for neater stringing or wiring.*

Caution - *We do suggest extra care be given when removing the caps, beads etc. to avoid bending the mandrels. These were specifically designed to create the smallest hole possible (3/32") for finer jewelry construction.*

These Mandrels are machined with the highest precision rendering an exact tool.

Draw plate available
Hardwood size 7 3/4 X 2 X 3/4
Large pull hole allows working on 3/4" dowel

Excessive force and also excessive heat can damage these instruments. They will do all you want just treat with care. If you have ever melted a stainless steel mandrel you know what I'm talking about.
